Req # 1141844 Backup

The NIDCD 5RC Conforcal Microscopy Core facility presently has a Zeiss LSM710 Confocal Microscope which was purchased approximately one year ago. We are requesting an upgrade to the stage on this microscope in order to motorize it in the X and Y directions. With the addition of the motorized stage we can move slides without disturbing the microscope. Three items are requested (a Scanning Stage, a Stage Controller, a Joystick 2 Axis and an electtronics connection cable). An installation charge of $750 is also included, which cover the labor to remove the old stage, and replace it with the motorized stage. No company other than Zeiss sells these parts for upgrading to a motorized stage on a Zeiss LSM710 confocal microscope, and thus this sole source request.
