1. Coordinate floor drain locations with actual equipment installed.

2. Provide and install 12" diameter exhaust header for 6" diameter vents from power wash equipment and route to exhaust louver as shown. Coordinate installation with mechanical exhaust ducts in the area.

3. Provide 1/2" water main branch with concentric wall vent kit. Use 1/2" supply and exhaust 6" vents to existing main connections.

4. Provide and install hooded wall cap with birdscreen.

5. Coordinate installation with equipment installed on roof. Maintain a minimum 10' distance horizontally from air intakes.

Plumbing General Notes:

1. For general notes, legend, and abbreviations refer to sheet P-001.
